

# EGG DONATION PACKAGE

## INCLUDES:

### 1 PRELIMINAR STUDY

Case-oriented cycle planning and all consultations.

Selection and synchronisation of the donor.

Genetic compatibility test between patient and donor (16,592 mutations).

### 2 PREPARATION

Ultrasound scans and hormone tests for endometrial preparation (when done at the clinic).

Ultrasound scans and hormone tests of the donor.

Medication for donor's ovarian stimulation.

### 3 EGG RETRIEVAL

Preoperative evaluation and sedation.

Donor's puncture and follicular aspiration.

Rest in clinic.

### 4 LAB PROCEDURES

Preparation of samples and procedures.

IVF-ICSI (intracytoplasmic sperm injection) of all oocytes.

Embryo culture to blastocyst (day 5-6).

Use of Embryoscope+ for embryo development.

KIDScore /IDAScore (AI, advanced software for embryo selection).

### 5 EMBRYO TRANSFER

Embryo transfer in natural or medicated cycle.

Rest in clinic.

Vitrification of spare embryos.

### 6 POST-TRANSFER

BHCG: pregnancy blood test (when done at the clinic).

Two pregnancy check-ups (when done at the clinic).

2 years conservation of vitrified embryos.

## ALSO, WHEN NECESSARY:

### LAB TECHNIQUES

Sperm selection techniques:

- MACS.
- Microfluidic sorting / Fertilechip.

Laser assisted hatching.

### ADDITIONAL RESOURCES

PRP (Platelet Rich Plasma) endometrial injections.

Sperm freezing prior to treatment.

Specific transfer techniques.

~~COST: 12.445 €~~

-30%

**FIXED PRICE 8.665 €**

Guarantees:

- A minimum of 8 mature donor oocytes.
- We guarantee at least 2 blastocyst-stage embryos. In the event of not obtaining 2 blastocysts (or if there is only 1 embryo that does not result in a life birth), and if the treatment is to be repeated, the patient will pay 1860€; the remaining costs will be covered by the clinic.
- This guarantee does not apply in case of male factor infertility or if the male partner is 50 years of age or over. Male factor is assessed through a series of tests, such as Karyotyping, sperm analysis, double strand sperm DNA fragmentation test etc.

The validity of this estimate is 6 months from the date of your first consultation.

Due to current legislation, medication costs are not included. These will be assumed by the patient.

When an embryo transfer fails, an additional cost of 1860€ will apply to subsequent attempts.

The use of donor sperm has an additional cost of 435 €.

Donor gametes (male and female) are part of the Information System of Assisted Human Reproduction (SIRHA).

In case of cancellation of the treatment by the patient, all costs incurred until that point must be paid.

Cancellation of endometrial preparation for embryo transfer due to hormone levels, follicular development or endometrial growth does not have a cost.

After 2 years of embryo cryopreservation, it will be your decision to either choose from one of the authorized applications regarding embryo donation/destruction or the payment of a yearly fee of conservation for future use.
